S.

S, es'. Has in English the same hissing sound as in other languages, and unhappily prevails in so many of our words that it produces in the ear of a foreigner a continued sibilation. In the beginning of words it has invariably its natural and genuine sound: in the middle it is sometimes uttered with a stronger appulse of the tongue to the palate, like z; as rose, roseute, rosy, osier, nosel, resident, busy, business. It sometimes keeps its natural sound; as loose, designation. In the end of monosyllables it is sometimes s, as in this: and sometimes z, as in as, has; and generally where es stands in verbs for eth, as gives.—Walker. The above assertion of a "continued sibilation" is a very great mistake, arising from the grossest ignorance of the actual pronunciation of our words, and of pronunciation in general, as a part of every language; and the absolute fact is, that the English language does not abound so much in the sound of s, as either the Greek or Roman; and that, in hundreds of syllables, in which foreigners suppose it to be sounded s, it is really sounded z. Beside this, in the third person singular, of every verb, it is sounded z; and in the double s, in great numbers of syllables it is sounded ezh, or esh, and the single s also, as in vision, decision, sulesman, vîzh-un, de-sîzh-un, să/lzmăn, and in the plurals of almost all nouns, it is sounded z. Reader, try thousands of plurals. It is contrary to all harmony, and the rules of accent; it is in fact barbarous in articulation, to dwell upon the sound of any consonant, when it commences a word, for this simple reason, that no consonant, nor union of consonants, as in strength', stri've, grind, ground', at the commencement of a syllable, can be dwelt on without disgusting a nice, and judicious musical car; because it, or they. cannot be accented; the consonant, invariably, throughout our nervous, beautifully constructed language, always ending the syllable. However, therefore, the admirers of a late celebrated actor may have been pleased with his invariably grinding out such consonants, I hesitate not to say, in the very teeth of ignorance of verbal criticism, that the custom was barbarous in the extreme; and that a Greek, or Roman audience, would lave hissed him off the stage, as Demosthenes was hased till he reformed his

The s, therefore, or any other conpronunciation. sonant, or combination of consonants, is never dwelt on by good English speakers when it begins a word: and, when it is followed by any vowel, or diphthong, it flows sweetly into that vowel, or diphthong, as if it were itself a vowel, as in sa'lt, sweet', swing', swim', swê'ep, swâ'rm, &c.—J. SEMIVOWEL, sêm'ê-vàô-êl, n. A consonant which makes an imperfect sound, or does not demand a total occlusion of the mouth. - Walker. Avery great mistake, evincing a total ignorance of the very nature and powers of the simple sounds, and letters as their signs, and of the actual reason for calling some semivowels, some mutes, &c. The simple fact is, that the semivowels are so called, in contradistinction to the mutes, because the organs can be kept together, almost at pleasure, in pronouncing them, as, ef, el, em, en, er, es, ez, esh, ezh, ing, esh, eth; whereas, in pronouncing the mutes, as ob, ed, eg, ek, ep, et, the organs cannot be kept together, at pleasure; and in pronouncing three of them, ek, ep, et, they cannot be kept together for the smallest space of time; and the attempt to prolong their sounds by keeping the organs together, produces absolute silence. The semivowels are therefore so called, as comparing them with the long vowels, a', a', a', b', b'.—J. K.

V.

V has two powers, expressed in modern English by two characters, V consonant and U vowel, which ought to be considered as two letters; but as they were long confounded while the two uses were annexed to one form, the old custom still continues to be followed.

U, the vowel, has two sounds, one clear, expressed at other times by eu as obtuse; the other close, and apother times by eu as obtuse; the other close, and approaching to the Italian u, or English oo, as obtund.

V, the consonant, has a sound nearly approaching to those of b and f. Its sound in English is uniform, and is never mute.—Todd's Johnson. Mere paper and thread tied round with ignorance. V is a consonant; and U is a vowel and diphthong; for which reason the U is arranged separately in this dictionary. Look at my Principles of Pronuciation.—L. "It flew, and whizzing, cut the liquid way"—

It flew, and whizzing (the air), cut the liquid way;—which would destroy the measure of the verse, ever line in poetry being a verse. I have presumed t give the verb an active, transitive signification, a above.—J. K.

WORM, ôārm', vi. To work secretly.

WORM, ôārm', vi. To drive by slow and secret means. To deprive a dog of something, nobody knows what, under his tongue, which is said to prevent him, nobody knows how, from running mad.—

[Whoever was the author of this additional and satisfied a consequency of the term "Wrym" as any rical no-explanation of the term "Worm," as applied to a dog, he has only shown his own absurdity, by the positive assertions he has made of the non-existence of an operation of which he is totally ignorant. The fact is, that there is a round, white, soft nerve, of about an inch and nearly a half long, that lies not far from the point of the under part of a dog's tongue, which the compiler of this dictionary has often removed; and the positive effect of which removal is, that though the dog may be bitten by a mad dog, he will not bite any person; but I am not certain whether his being wormed, as it is called, will prevent him from going mad. Take a puppy, or a small dog, between your knees,—the back of his head must of course be undermost; and take firm hold of the point of his tongue with a towel, to prevent the tongue from slipping through your fingers; then, with a sharp pointed penknife, or a lancet, make a small longitudinal incision of the skin that lies over the nerve, sufficient to uncover it, and allow you to immediately put a wire, or single prong fork, crosswise under the nerve. Not removing the fork, then with your right hand thumb, and first finger, with or without a cloth, move the fork along from you till you uncover the nerve at the extreme point from you, and then lay aside the fork, and with your thumb and finger, take hold of the end of the nerve which you have uncovered, and draw it towards you, and you will immediately free the end next to you, and draw the whole nerve out. A puppy so wormed will not dog, being properly held by an assistant, may be wormed in the same way, and with the same ease. J. K.] WORMEAT, ôůrm'ê't, a.

There is a peculiar, and fine-sounding diphthong, terminating a number of Hebrew words, which I have marked by uniting in the middle, and last syllable of many words, the vowels åi—the sounds being åå—åå, ending in fact in åi. The English have not such a diphthong.

The obstacles to ascertaining the true pronunciation of the Scripture Proper Names are these. First, it is not known whether the Bible is written in Hebrew, Chaldee, or a dialect formed from both. Secondly, the Jews themselves confess that they know not the true power of the letters; and that, the ancient pronunciation is lost. Thirdly, the learned generally acknowledge one letter to be doubtful, and differ about others. Fourthly, many of the Scripture Names have been so perverted to suit the Latin, or Greek orthography, that it is useless to give the true pronunciation even when known: as, for instance, Shomeron, (now written Samaria, and generally pronounced, by the clergy, Sama'ria, as I have accented it on the letter a, but, by some, Samari'a, with the acent on the i,) and many others. Amidst these difficulties, I have contented myself with following the common usage of well-educated men; and any Hebrew scholar who wishes to be singular can follow his own fancies; and, under these circumstances, easily defend them.

It is to be observed, that the Ancients never laid an accent on a consonant, upon which their acute, grave, and circumflex, could not possibly fall. But we, in consequence of the ancient pronunciation being almost entirely lost, frequently accent the consonants, in our pronunciation of Latin and Greek, agreeably to the nature of our own accent; to which we frequently make the Latin and Greek conform.
